

GUIDELINES FOR PREPARING COUNTRY PRESENTATION

The workshop focuses on the Strategic Approach to International Chemicals Management and making links with Chemical Safety and International Health Regulation. The programme includes a session giving participants from each country (15 minutes per country) to present key issues related to chemical safety and chemicals management that need to be highlighted. In order to achieve the workshop's objective, your presentation should focus on the following topics:

- Brief profile of chemicals related issues in the country;
- Priority chemicals and/or chemical-related issues in your country that need immediate attention;
- Chemical safety and chemicals management activities in your country;
- Examples of activities related to chemical safety and chemicals management in your country that you think could be beneficial for other countries.
- Chemical incident(s) in your country (if any) that can be used as an example in terms of management of the incident; and
- Suggestions for, or examples of, alternatives to the use of chemicals in your country.

Please indicate in the registration form if any additional equipment is required for your presentation. A group discussion session will also be held to discuss possible solutions for the South-East Asia Region.
